SUMMARY

Software engineer with hands-on internship and undergraduate research experience building full-stack applications. Led a five-person team as project manager for a senior capstone, and minoring in Business to understand both the technical and business sides of product development.

EXPERIENCE

Software Engineer Intern, nCino · Commercial Pricing & Profitability

May 2026 – Present

- Worked across the stack with Apex, Lightning Web Components, and SOQL, developing front-end features while resolving backend bugs surfaced both internally and by customers.
- Owned an end-to-end migration of 125 tests from Cucumber to Playwright, then automated a nightly run that posts a full test report to Slack.
- Led daily stand-ups within an agile workflow, coordinating priorities and unblocking the engineering team.

Undergraduate Research Assistant, UNC Wilmington

Nov 2025 – May 2026

- Built a front-end web application for viewing insights from AI-powered assessments that analyze nursing students' speech quality and related metrics.
- Collaborated with the Department of Computer Science and School of Nursing, meeting weekly to align on requirements and next steps.

Retail Golf Associate, Dick's Sporting Goods

May 2025 – May 2026

- Advised customers on golf equipment and drove sales by recommending gear to fit their needs as part of the sales team.
- Performed custom club fittings and equipment services for customers.

PROJECTS

Coach11 · Project Manager · TypeScript, Electron, AWS

Jan 2026 – Present

- Served as project manager for a 5-person team, coordinating two-week sprints to build a TypeScript and Electron desktop app for UNCW Women's Soccer coaches and analysts to upload match film and tag in-game events.
- Designed the database and built front-end features on an AWS backend using S3, RDS, API Gateway, and Lambda.

INSIGHTs · Flask, Python, JavaScript

Nov 2025 – May 2026

- Built the front-end web application, backed by a Flask server, for viewing insights from AI-powered assessments analyzing nursing students' speech quality and related metrics.
- Integrated an API to retrieve assessment data from AWS.

Wi-Fi Heatmap · Python, Raspberry Pi

Aug 2025 – Dec 2025

- Built the React front end for a 5-person team; the system captured Wi-Fi scan data from dongles on Raspberry Pis and triangulated pings into a heatmap estimating people's locations in a space.

EDUCATION

University of North Carolina Wilmington · B.S. Software Engineering

Expected Dec 2026

- Minor in Business
- GPA 3.7

SKILLS

Languages

Python, Java, JavaScript, TypeScript, SQL, Apex, HTML/CSS

Frameworks & Tools

React, Next.js, AWS, Salesforce, Git, Claude Code

Professional

Project Management, Communication, Teamwork, Customer Service, Full-Stack Development
